Equation 1: Equation 2: Equation 3: Adding the terms of the first and second equations together will yield . Then, add that to the third equation so that the y and z terms are eliminated. You will get . This tells us that $x = 1$. Plug this $x = 1$ back into the systems of equations. Now, we can do the rest of the problem by using the substitution method.

Equations / Solution Sets - Algebra 1

To find the solution set of an equation with a given domain, you first need to plug each value in the domain into the equation to get the respective range values. Create ordered pairs from these values and write them as a set.

What's a Solution Set? | Virtual Nerd

In solution set notation we say that the solution set is empty and denote it with the symbol : \emptyset . This symbol is often called the empty set. We now need to make a couple of final comments before leaving this section. In the above discussion of empty sets we assumed that we were only looking for real solutions.
