Building Single Page Application

ASP.NET. By Mike Wasson. Single-Page Applications (SPAs) are Web apps that load a single HTML page and dynamically update that page as the user interacts with the app. SPAs use AJAX and HTML5 to create fluid and responsive Web apps, without constant page reloads.

More advanced, richer applications can be built with Single Page Applications. It takes more time to initialize the application as it has to be downloaded to the user's device. But this can be improved by server-side rendering. SPAs require the user to have JavaScript turned on. Memory leaks in JavaScript can lead to a drop in performance (or crash).
