Similar to PDF Books World, Feedbooks allows those that sign up for an account to download a multitude of free e-books that have become accessible via public domain, and therefore cost you nothing to access. Just make sure that when you're on Feedbooks' site you head to the "Public Domain" tab to avoid its collection of "premium" books only available for purchase.

Crutchfield Speaker Wire Guide

Thick wire (12 or 14 gauge) is recommended for long wire runs, high power applications, and low-impedance speakers (4 or 6 ohms). For relatively short runs (less than 50 feet) to 8 ohm speakers, 16 gauge wire will usually do just fine.

Speaker Wire: How to Choose the Right Gauge and Type

You wire the two left speakers in parallel, positive-to-positive and negative-to-negative, to a front amp channel, the two right speakers wired the same way to the other front channel, and the sub wired to the amp's bridged rear channels.

Crutchfield Speaker Size Guide

By Doug Newcomb, Mike Mettler . Part of Car Audio For Dummies Cheat Sheet . When wiring your car audio system, using the proper gauge wire for an amplifier is critical. To avoid problems and get the best sound, determine the fuse ratings of your amplifiers and their distance from the battery and refer to the following chart to determine the proper power-wire gauge.

Wire Gauge Chart for Car Audio Systems - dummies

Two-conductor wire is self-explanatory, but four-conductor speaker wire is handy for running cable to a wall-mounted volume control, or for using a single run of cable to connect two speakers in different parts of a room ("stopping off" at the first speaker to attach two conductors, and then continuing the run to attach the other two ...

Who needs expensive audio cables? - CNET

If you're a total newbie to the world of car audio systems, then there's just one key fact that you should be aware of. It isn't some byzantine formula that's used to calculate speaker power levels or optimal speaker placements. It doesn't have anything to do with squeezing every last bit out of a car audio capacitor or adding an additional battery.

Beginner's Guide to Car Audio Systems - Lifewire

In the case of speaker wires you'll normally see choices of 12-gauge, 14-gauge, 16-gauge and 18-gauge, with the smaller numbers thicker than the larger numbers. That means 12-gauge (12AWG) speaker wire is much thicker than 18-gauge (AWG) wire, so if you're looking for the thickest wire you'd want 12AWG. (Yes, 10AWG would be even thicker, but then you start running into other problems with capacitance and signal quality which we're not going to get into here.)
