the best ratings a diamond can achieve in terms of its material properties are: D color and flawless. These diamonds are extremely rare and command an excessively high premium in their prices.

### **Diamond Ratings And Quality - The Definitive Guide**

These five roles in diamond grading include size, nature, number, location, and the relief of the inclusions.

### **Diamond Clarity: Grading Scale & Chart | The Ultimate ...**

Diamond Cut does not refer to a diamond's shape, but to the proportion and arrangement of its facets and the quality of workmanship. The amount of brilliance, sparkle and fire in a diamond is determined by cut. Grades range from 'Excellent' to 'Poor.' Diamond Carat refers to a diamond's weight. Generally speaking, the higher the carat weight, the more expensive the stone.

The GIA Diamond Clarity Scale has 6 categories, some of which are divided, for a total of 11 specific grades. Flawless (FL) No inclusions and no blemishes visible under 10x magnification. Internally Flawless (IF) No inclusions visible under 10x magnification.

### **What is Diamond Clarity | The 4Cs of Diamond Quality by GIA**

For instance, a diamond graded as SI1 in clarity and H in color by GIA/AGS could be VS1 in clarity and F in color for IGI/EGL. Such a diamond would be worth much more because the color and clarity grades are better than what GIA/AGS would rate. Unfortunately, many jewelry stores try to sell diamonds with IGI/EGL grading reports to their customers.
