Excel functions (by category) - Office Support

A formula is an expression which calculates the value of a cell. Functions are predefined formulas and are already available in Excel. For example, cell A3 below contains a formula which adds the value of cell A2 to the value of cell A1. For example, cell A3 below contains the SUM function which calculates the sum of the range A1:A2.

Formulas and Functions in Excel - Easy Excel Tutorial

Summary. The Excel AND function is a logical function used to require more than one condition at the same time. AND returns either TRUE or FALSE. To test if a number in A1 is greater than zero and less than 10, use =AND (A1>0,A1<10). The AND function can be used as the logical test inside the IF function to avoid extra nested IFs, and can be combined with the OR function.

How to use the Excel AND function | Exceljet

There are two ways to enter formulas in Excel. Either type the formula in the Formula Bar or use the Function Arguments dialog box. The dialog box takes care of the syntax such as placing comma separators between arguments and surrounding text entries in quotation marks. The steps used to enter the IF/OR formula in cell B4 are as follows:

How to Use the AND, OR, and IF Functions in Excel

Typing a formula in a cell or the formula bar is the most straightforward method of inserting basic Excel formulas. The process usually starts by typing an equal sign, followed by the name of an Excel function. Excel is quite intelligent in that when you start typing the name of the function, a pop-up function hint will show.

Basic Excel Formulas - List of Important Formulas for ...

Formula. Description =IF(A2>B2,TRUE,FALSE) IF A2 is greater than B2, return TRUE, otherwise return FALSE. 03/12/14 is greater than 01/01/14, so the formula returns TRUE. =IF(AND(A3>B2,A3<C2),TRUE,FALSE) IF A3 is greater than B2 AND A3 is less than C2, return TRUE, otherwise return FALSE. In this case both arguments are true, so the formula returns TRUE.

Using IF with AND, OR and NOT functions - Office Support

Compound interest in Excel Formula. Compound interest is the addition of interest to the principal sum of a loan or deposit, or we can say, interest on interest. It is the outcome of reinvesting interest, rather than paying it out, so that interest in the next period is earned on the principal sum plus previously accumulated interest.
