MongoDb is a NoSQL database, so unlike SQL, mongodb is not designed to handle relationships between databases and connect data fields together. However, there is a function that approximates database join -lookup(!) Finally, you choose a name to convert external documents to, and they will appear in our query response table with the new name.

MongoDB Applied Design Patterns. Designing the database is a huge process and it lays the groundwork for everything that comes later. MongoDB Applied Design Patterns forces you to think how NoSQL databases should be designed based on a project's needs. Since typically MongoDB is schemaless it can feel weird designing patterns this way.
