and actually calculates the area of the parallelogram spanned by the two vectors  $e_1$  and  $e_2$  as shown in the diagram below:. Particularly, this implies that the pdp is 0 if both vectors  $e_1$  and  $e_2$  are parallel. If the two vectors are defined by the three points  $v_1$ ,  $v_2$  and  $p$  as shown in the figure above, it results obviously in the fact that the pdp is zero only if the  $p$  lies on the line  $e_1$  ...

### (Projected) Point on Line (2D) Algorithm

A line is a straight path of points that has no beginning or end. A line segment is a portion of a line that has two endpoints. A ray is a portion of a line which has one endpoint and extends forever in one direction. Beginning Draw a line segment, line, and ray on the board. Point to each and have students name them. Intermediate Draw a line ...

### Chapter 4 Lesson1-0 Points, Line Segments, Lines, and Rays

So at this point in the module, we're now going through smaller topics on points that you may not use all the time but which will come in very handy when they do come up. So by connector lines, I'm referring to what you see on this corporate structure diagram for Jazz Pharmaceuticals where

we have all these boxes.
