AST (SGOT) (Aspartate Aminotransferase) - Ascend Reference ...

The AST/ALT ratio is typically > 1 in alcoholic liver disease and < 1 in non-alcoholic liver disease. Although AST levels are increased with cardiac and skeletal muscle disease, more specific tests are available in these situations. Haemolysis during collection or refrigeration of unseparated blood may cause an artefactual increase. See Table 1.

RCPA - Aspartate aminotransferase

An aspartate aminotransferase (AST) test measures the amount of this enzyme in the blood. AST is normally found in red blood cells, liver, heart, muscle tissue, pancreas, and kidneys. AST formerly was called serum glutamic

oxaloacetic transaminase (SGOT). Low levels of AST are normally found in the blood.

Aspartate Aminotransferase (AST) | Michigan Medicine

Clinical Significance Aspartate Aminotransferase (AST) - AST is widely distributed throughout the tissues with significant amounts being in the heart and liver. Lesser amounts are found in skeletal muscles, kidneys, pancreas, spleen, lungs, and brain. Injury to these tissues results in the release of the AST enzyme to general circulation.
