WebSphere Application Server V7 Administration

Abstract. This IBM® Redbooks® publication provides system administrators and developers with the knowledge to configure a WebSphere® Application Server V7 runtime environment, to package and deploy applications, and to perform ongoing management of the WebSphere environment. As one in a series of IBM Redbooks publications and Redpapers™ publications for V7, the entire series is designed to give you in-depth information about key WebSphere Application Server features.

WebSphere Application Server V7 Administration and ...

IBM WebSphere Application Server V7 introduces new profile types that enable two new administrative topologies. An administrative agent profile acts as a dedicated management server. In this environment, the administrative workload is shifted from each individual application server to the administrative agent server, thereby reducing the administrative overhead and making administrative tasks easier.
